SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	04/16/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

**Office Action Summary**

Application No.

10/030,325

Applicant(s)

JACQUEZ, GEOFFREY M

Examiner

Jakieda R. Jackson

Art Unit

2626

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 26 February 2007.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-4 and 6-16 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4 and 6-16 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 26, 2007 has been entered.

### ***Response to Arguments***

2. Applicant argues that Thomson fails to teach accessing user data from a linked user database that has been generated as a result of at least one previous interaction between the identified user and a help software program and specifically related to the identified user, as amended. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection. However, Noyes teaches that the Relationship inheritance assembles the user relationships describing a specific concept from the network of concepts in the Knowledge Representation Database into the Descriptive Database (column 25, lines 8-55). Noyes further teaches that each new record will be added in relationship to some *existing concept record*. Getting the Parent record reference number can be accomplished through user interaction (column 31, line 40 – column 32, line 9).

Applicant further argues that Thomson fails to teach formulating a response by integrating a natural language input from the user with specific user data from the linked

Art Unit: 2626

user database and data from the knowledge database. As previously noted, Thomson does not access specific user data regarding past interaction with the help software from a user database. Thus it would be impossible to integrate this information with other sources of information to formulate a response, if it is not be collected, accessed and processed in the first place. However, Noyes teaches accessing specific user data regarding past interactions with the help software program from a user database, as previously noted.

Applicant also argues that Thomson fails to teach updating the linked user database with a natural language input and response thereto, whereby future responses to the identified user may refer to the updated linked user database for the identified user. Applicant argues that there is no discussion of using any data generated during the encounter between a user and the help software program for operational purposes. However, Noyes teaches that the evaluation of context is without precedent in the art and enables the novel features of the means for user interaction of the invention (column 9, lines 7-23). Noyes further teaches that the description of the concepts facilitate the views, and user interaction with the knowledge representation database (column 29, line 61 – column 30, line 2 with column 31, line 40 – column 32, line 9 and column 37, lines 1-37).

Since Thomson in view of Noyes in combination teach independent claim 1, dependent claims 2-16, which depend from and further limit independent claim 1 are likewise taught. However, a new ground of rejection has been provided in view of Horvitz et al.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. **Claims 1-2, 6-11 and 13-14** are rejected under 35 U.S.C. 102(e) as being anticipated by Horvitz et al. (USPN 6,021,403), hereinafter referenced as Horvitz.

Regarding **claim 1**, Horvitz discloses a method for utilizing a help software program having a plurality of user databases and a knowledge database, said method comprising the steps of:

identifying the user (profile system; column 6, lines 1-34 and column 17, lines 29-45),

obtaining an identification code of the identified user (column 17, lines 29-45),

searching the user databases to link the identification code with one of the user databases (column 17, lines 29-45),

accessing specific user data from the linked user database that has been generated as a result of at least one previous interaction between the identified user and the help software program and that is specifically related to the identified user from the linked user database (column 2, lines 61-66 and column 20, lines 15-45),

Art Unit: 2626

receiving a user's natural language input (free-text query; column 11, lines 14-30),

interpreting the natural language input (natural language query; column 23, lines 48-64),

formulating a response by integrating the natural language input from the user with specific user data from the linked user database and data from the knowledge database (column 2, lines 61-66 and column 20, lines 15-45),

submitting the response to the user (respond to requests; column 22, lines 55-67),

updating the linked user database with the natural language input and response whereby future responses may refer to the updated linked user database for the identified user (update; column 6, lines 1-34 and column 7, lines 17-47 with column 20, lines 15-45),

the help program working in conjunction with a computer related application for interacting with a user in a natural language format when the user requires assistance in relation to the computer related application (column 2, lines 61-66 and column 6, lines 1-34); and

formatting the response being further defined as uniquely molding the response to the identified user based upon the specific user data from the linked user database (column 17, lines 29-45).

Regarding **claim 2**, Horvitz discloses a method wherein the submitting of the response is further defined as submitting a natural language response to interact with

Art Unit: 2626

the user in a completely natural language conversation (natural language; column 23, lines 48-64).

Regarding **claim 6**, Horvitz discloses a method wherein the uniquely molded response is further defined as guiding the identified user to a predetermined result based upon the particular computer application (column 18, lines 20-38).

Regarding **claim 7**, Horvitz discloses a method wherein the guiding of the identified user is further defined as assessing the current input by the user against the predetermined result to further mold future responses to the user in order to direct the user toward the desired result (column 7, line 48 – column 8, line 55).

Regarding **claim 8**, Horvitz discloses the method further including the step of determining the type of computer related application chosen by the identified user in order to further mold the responses to the user (column 1, lines 14-35).

Regarding **claim 9**, Horvitz discloses the method further including the step of accessing specific information about the chosen computer related application and incorporating this information into the response to the user (column 1, lines 14-35).

Regarding **claim 10**, Horvitz discloses the method wherein the accessing of the specific user data for identified user is further defined accessing previous inputs and responses for the identified user (column 17, lines 29-45).

Regarding **claim 11**, Horvitz discloses the method wherein the accessing of the specific user data for the identified user is further defined as accessing commercial transaction history for the identified user (history information; column 8, lines 44-55 and column 17, lines 29-45).

Regarding **claim 13**, Horvitz discloses a method wherein the help program further includes a trainer and the method further comprises the step of interacting the trainer with the help program to continually update and maintain the knowledge database (update; column 9, lines 2-12 and column 7, lines 17-47 with column 17, lines 29-45).

Regarding **claim 14**, Horvitz discloses a method wherein the step of interacting the trainer with the help program is further defined as initiating the trainer to populate, update (update) and monitor (monitor) the knowledge database (column 6, lines 1-34).

### ***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. **Claims 3-4** are rejected under 35 U.S.C. 103(a) as being unpatentable over Horvitz in view Noyes (USPN 5,379,366).

Regarding **claim 3**, Horvitz discloses a method for utilizing help software, but does not specifically include the step of utilizing a natural language simulator to parse the natural language input before the step of interpreting the natural language input.

Noyes discloses a method for representation of knowledge in a computer as a network database system further including the step of utilizing a natural language

Art Unit: 2626

simulator to parse the natural language input (figure 34, element d) before the step of interpreting the natural language input (figure 34, element e; column 43, lines 4-13 and lines 34-46), to evaluate the input structures recognized by the parsers.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Horvitz's method wherein includes the step of utilizing a natural language simulator to parse the natural language input before the step of interpreting the natural language input, to optimize the search paths required to respond to the input expression (column 42, lines 65-68), as taught by Noyes.

Regarding **claim 4**, Horvitz discloses a method for representation of knowledge in a computer as a network database system further including recording and storing the natural language conversation between the user and the help program in the linked user database (storing information in the database; column 12, lines 51-63 and column 17, lines 29-45).

7. **Claim 12** is rejected under 35 U.S.C. 103(a) as being unpatentable over Horvitz in view Thomson (USPN 5,634,051).

Regarding **claim 12**, Horvitz discloses a method for utilizing a help software program, but does not specifically teach a method further including a step of accessing a product database, compiling information from the product database, and determining if any of the compiled information should be forwarded to the identified user with the response.

Thomson discloses the method further including the step of accessing a product database, compiling information from the product database, and determining if any of the compiled information should be forwarded to the identified user with the response (column 4, lines 21-29 and column 8, line 58 – column 10, line 30), to save time for the user.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Horvitz's method wherein it includes the step of accessing a product database, compiling information from the product database, and determining if any of the compiled information should be forwarded to the identified user with the response, as taught by Thomson, to save time for the user and to report the results in a manner that is uniquely relevant to him or her (column 9, lines 33-40).

8. **Claim 15** is rejected under 35 U.S.C. 103(a) as being unpatentable over Horvitz in view Dekelbaum et al. (USPN 5,838,682), hereinafter referenced in view of Dekelbaum.

Regarding **claim 15**, Horvitz discloses a method for utilizing help software, but does not specifically include the step of determining the need for human intervention and accessing human intervention in a natural language format such the interaction with the help program and a human representative appears seamless to the user.

Dekelbaum discloses a method and apparatus for establishing communications including the step of determining the need for human intervention and accessing human

Art Unit: 2626

intervention in a natural language format such the interaction with the help program and a human representative appears seamless to the user (operator interrogates the database; column 15, lines 17-34), to supplement customer transmission.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Horivitz's method such that it includes the step of determining the need for human intervention and accessing human intervention in a natural language format such the interaction with the help program and a human representative appears seamless to the user, to provide information corresponding to session history (column 15, lines 17-24), as taught by Dekelbaum.

9. **Claim 16** is rejected under 35 U.S.C. 103(a) as being unpatentable over Horvitz in view of Johnson et al. (USPN 5,978,455), hereinafter referenced Johnson.

Regarding **claim 16**, Horvitz discloses a method for utilizing help software, but does not specifically include the step of formulating a pricing plan for the help program based upon the amount of time the user engaged in conversation with the help program.

Johnson discloses a method and system for determining call periods further including the step of formulating a pricing plan for the help program based upon the amount of time the user engaged in conversation with the help program (figure 3 with column 6, lines 41-51), to access billing rate information.

Art Unit: 2626

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Horvitz's method such that it further includes including the step of formulating a pricing plan for the help program based upon the amount of time the user engaged in conversation with the help program, to access billing rate information to decide on a more optimal period, as taught by Johnson (column 6, lines 41-59).

### ***Conclusion***

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jakieda R. Jackson whose telephone number is 571.272.7619. The examiner can normally be reached on Monday through Friday from 7:30 a.m. to 5:00p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Hudspeth can be reached on 571.272.7843. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2626

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

A handwritten signature in black ink, appearing to be 'JRJ', is located to the left of the date.
